Journal of Low Temperature Physics, Vol. 8, Nos. 5/6, 1972

Subject Index to Volume 8

Adsorption, 79, 287
Alloys, 195, 219, 339, 369
Anharmonic theory, 511
Argon, 79

Beryllium, 175
Bi–Sb, 339, 369
Bismuth, 315

Cesium, 457
Compounds, 305
Compressibility, 421, 479
Copper, 79, 287
Critical velocity, 105
Cu–Zn, 195

de Haas–van Alphen effect, 195, 305

Elastic moduli, 93
Electrical resistivity, 97, 277
Exchange theory 115, 159
Electronic insulator phase, 339

Fermi surface, 421
Films, 171, 449
Fluctuations, 29, 219
Flux penetration, 177

Gadolinium, 171
Gapless state, 315, 369
Ground-state energy, 479

Heat capacity, 287
Helium, 3, 61, 79, 105, 187, 229, 261, 287, 511

Impurity effects, 3, 213, 261
Indium, 177
Insulators, 339
Intermediate state, 97, 277
Isotopes, 3, 255

Kapitza resistance, 449

Lead, 171
Liquid ^{3}He, 261
London model, 47

Magnetic breakdown, 175
Magnetism, 3, 175, 177, 463

Neon, liquid, 255
Neutron scattering, 47
Nosanow cluster expansion, 499
Nuclear magnetic resonance, 3

Order parameter, 29

Pd–In, 195
Persistent currents, 187
Pressure, 93, 421, 479
Proximity effect, 171

Rotating helium, 187

Semimetals, 315
Solid helium, 3, 115, 159
Solid hydrogen, 515
Spins, 219, 229, 463
Spin waves, 229, 463
Superconductors, 29, 47, 97, 171, 177, 213, 219, 277
Superconducting films, 171
Superfluid helium, 61, 105, 187

Thermal conductivity, 255
Tunneling, 3, 29, 213
Type-II superconductors, 47

V_3Si, 93
Vacancy waves, 427
Vortices, 47, 61

Wu–Krumhansl correlation function, 499
